

K2 INFANT Guardian Remote Access

K2 INFANT Guardian has a web-based service for senior obstetric clinical staff to view activity in each of the birth suite rooms from any device. These are the key functions you will need to know.

Log in & Access

Only users with a Web Access security role can access the *Clinical Web Portal* to view the live CTG traces.

Home & Site Selection

View a list of all sites. The *Site* dropdown list filters to display only words within the selected site.

Ward View

List all wards within a site. On mobile, it shows only active wards with patients being monitored.

Patient Search

Search for patients using parameters such as Hospital ID, name, or date of birth.

Patient Information

Access demographics, admittance details, reason for attendance, antenatal notes, partogram, and outcome.

CTG Trace & Notes

Display current and previous CTG traces. Live monitoring refreshes automatically. View notes entered live from the bedside devices.
